AMENDMENTS TO THE SPECIFICATION

Please replace the Abstract of the Disclosure at page 30 with the following Abstract of the Disclosure:

In one example of a method for analyzing data, network traffic is captured at a network monitoring computer during a period of time. The network traffic is compiled into sections. Information about the sections including, start time, end time, number of frames in the section and bytes/sec is compiled. At a user computer remote from the network monitoring computer, a histogram is stored. The histogram includes a portion of the captured network traffic, start time, end time, total frames and total bytes. The histogram also includes, for each of the sections, the information about the sections.
